1. Project Overview

Dear Friend is a short poetic tablet-based story created for an in-situ exhibition on the theme of care at the Geneva Municipal Library.

The story is experienced from a first-person perspective.

Camille, a student participating in a "rent-a-student" university program, visits Sylvia, an elderly woman seeking help with her computer. While freeing up storage space and sorting through old files, Camille gradually discovers fragments of Sylvia's past and present life. As the two grow closer, Camille is drawn into a difficult decision : whether to delete a digital trace of a recently deceased friend or preserve it.

Through this intimate encounter, *Dear Friend* explores care, memory, and grief.

Project Type

Intimate, poetic, atmospheric, human.

Estimated Experience Time

3–5 minutes

Target Audience

General public (recommended age : 12+)

2. Creative Vision

The music and sound design should support Camille's and Sylvia's emotions in a subtle, non-dramatic way.

The overall experience should feel warm, intimate, and slightly dreamlike. We imagine a space suspended between memory and reality, evoking a feeling close to a gentle purgatory.

Players should feel as though they are uncovering personal stories rather than completing tasks or achieving goals. The role of the audio is to support immersion, empathy, and discovery without overwhelming the experience.

Emotional Journey

Beginning

- Neutral
- Indifferent
- Slightly bored

Middle

- Curiosity
- Discovery
- Growing emotional connection

End

- Reflection
- Acceptance
- Emotional resolution

Music should never dominate the experience. It should feel like it naturally belongs to the environment.

3. Music Direction

Style

Ambient / cinematic hybrid with organic and electronic textures.

References

- [Peak](#) (especially from 1:40 onward)
- [Kankyo Ongaku](#) / Environmental Music
- Satoshi Ashikawa
- Additional references to be discussed

Avoid

- Heavy percussion
- Trailer-style music
- Aggressive electronic sounds
- Constant melodies
- Excessive emotional manipulation

Silence is as important as music. The score should leave space for the emotional weight of the story and the spoken dialogue.

4. Interaction Audio & Sound Design Notes

The project includes small interactive audio cues such as mouse clicks, UI feedback, hover sounds, and window interactions.

These sounds should:

- Feel integrated with the overall sound world
- Support the tactile feeling of interaction
- Be subtle and non-intrusive
- Match the emotional tone of the scene
- Avoid stereotypical "digital UI" sounds

The composer/sound designer is encouraged to experiment creatively with these sounds. They do not need to be strictly realistic. Abstract, musical, or stylized interpretations are welcome as long as they support usability and immersion.

5. Audio Deliverables

Atmospheres

Exterior Ambience

- Birds
- Airplanes
- Distant construction site sounds

Sylvia's Presence

- Coughing
- Moving objects
- Turning book pages
- Other subtle signs of presence

Event Sounds

- Camera zoom in / zoom out
- Computer fan reacting to memory storage being cleaned
- Birds passing by the window
- Transitions between days

UI & Interaction Sounds

- Password entry (keyboard)
- Mouse clicks
- Hover feedback
- Delete file / move to trash
- Open file
- Close window
- Notifications

Music

The composer is invited to propose a musical structure adapted to the experience and its emotional progression.

6. Audio Integration & Collaboration

The project is developed in Unity.

At this stage, we are open to discussing the scope of the composer's involvement. Depending on interest and availability, this could include:

- Music composition
- Sound design
- Audio mixing
- Audio implementation in Unity
- Creative direction for the overall audio experience

We would be interested in hearing your preferred way of working and discussing which aspects of the audio pipeline you would like to contribute to.

The current list of audio assets and interactions should therefore be considered indicative rather than prescriptive.

7. Technical Requirements

- WAV
- 48 kHz
- 24-bit

When applicable:

- Seamless loops
- Clearly named files
- Separate stems and layers

8. Production Notes

The project values atmosphere, emotional subtlety, and sonic cohesion.

Music and sound design should feel like part of the same world rather than separate systems.

Creative proposals are welcome.

Dialogues

Voice recordings are currently in production and may not be available during the first composition phase. Temporary text and prototype timing should be considered indicative rather than final. The music should remain flexible enough to accommodate future dialogue integration.

9. Schedule

June 26 – July 1, 2026

- Recording Sylvia's voice

Until July 1, 2026

- Writing additional chapter(s)

July 1, 2026

- Composer brief finalized

July – August 2026

- Feature development (levels, interactions, audio integration, etc.)

From August 31, 2026

- UI polishing and fixes

From September 14, 2026

- Debugging with Raphaël Muñoz

October 1, 2026 (tentative)

- Final project delivery

October 10, 2026

- Exhibition opening

10. Project Demo

- Video walkthrough: [[Link](#)]
 - Playable browser build: [[Link](#)]
 - GitHub repository and development archive: [[Link](#)]
 - Project presentation PDF: [[Link](#)]
-

[Sabrina Calvo](#), TransFeminist, Science Fiction & Games Writer, Textile Artist

[Pierre Rossel](#), Master Media Design, HEAD – Geneva

[Andreia Rodrigues](#), Assistante, Master Media Design, HEAD – Geneva

Raphaël Muñoz, Media Designer, co-founder of [Aprobado Studio](#) – Geneva

Partner

[Cassandra Poirier-Simon](#) (email), [Service des bibliothèques municipales](#), Genève

Care Workshop

Sound Briefing—Project “Ooops!”

Setting: Café Le Jardin de Sonia | **Team:** Kostas, Luca & Carla

OVERALL STORYLINE OF THE PROJECT

Over the years, Sonias café has become a whole world filled with gifts, but the sad time has now arrived for the place to close. When the very first object ever given to the café shatters, a new customer starts putting the pieces back together. As the pieces come back together, the café's beautiful history unfolds, but it also brings us progressively closer to its end.

SOUND CONCEPT

The experience takes place across two scenes: outside and inside the café. Sound should act as an additional storytelling layer alongside the visuals, reinforcing the emotional contrast between these two spaces.

Outside Atmosphere: cold · dull · distant · slightly melancholic

Inside Atmosphere: warm · welcoming · cozy · comforting · slow

The soundscape consists of three main layers:

- 1. Ambient Backgrounds:** Two environmental soundscapes that establish the atmosphere and spatial feeling of the experience: one for the outside environment and one for the inside of the café.
- 2. Sound Effects:** Short sounds triggered through user interactions.
- 3. Voice Recordings:** Narration from Sonia [the café owner] and customers throughout the experience.

CURRENT STATE

Sources in Use: Sound effects and rain ambience currently come from free online sound libraries. The interior ambient track is a real recording from Café Le Jardin de Sonia.

Voice Recordings: Current ones are temporary English placeholders using student voices and will later be replaced with the final French-language recordings.

Interactive demo: <https://games.luca-cdrocha.ch/ooops/>

Current sound assets: <https://github.com/LucaCDRocha/head-md-care/tree/main/unity/ooops/Assets/Sounds>

SOUNDS NEEDED

The following sounds are already implemented as first versions, but need to be refined or re-produced to ensure a coherent experience.

Scene Outside:

- Rain [ambient] — quiet, soft, and melancholic rather than dramatic, with variations [rain hitting the café marquee, pavement, and nearby street surfaces]; can also be combined with subtle street traffic noises
- Door opening & closing [interaction] — creaking, should feel natural

Scene Inside:

- Café background [ambient] — can include elements such as coffee machine, cutlery and dish noises, and background music. If customer chatter is added, it should remain indistinct and mumbled so that Sonia's and the customers' voice narrations always stay clearly understandable. -> *The existing real café recording could serve as the base layer.*
- Coffee sip [interaction]
- Coffee mug hitting the table
- Object breaking — important story moment; should feel noticeable without sounding too exaggerated or artificial
- Rewind / Going back in time — visually the calendar moves backward in time, shelves gradually empty
- Snap [interaction] — short sound effect triggered each time a shard is placed via 'drag and drop' to repair the broken object
- Shard click [invalid interaction] — short click sound triggered when a user 'taps' on a shard instead of 'dragging and dropping' it, providing feedback that the shard is interactive but requires a different interaction method

SOUNDS TO BE TESTED

The following sounds are currently only conceptual. It would be valuable to produce and test them in order to evaluate whether they enhance the interactions or become distracting.

- Object click [interaction] — short click sound triggered when a user 'taps' on an interactive object
- 'ID card' objects [= objects without voice narration] — individual [short] sounds for each object to make them feel more alive; to be tested initially for gnome, train, and elephant
- Zoom in & out — subtle audio effect that accompanies camera movement when zooming into an object or returning to the main view

Thé ou Café - Sound Design Brief

For the sound design, we would like something quite simple and subtle. The project is structured as a sequence of scenes: a bike scene, then a seasonal scene, then the bike again, then another season, and so on. The environment stays mostly the same, with elements like the tree, the bench, the bike and the cup, but the atmosphere changes through seasonal details such as rain, snow, flowers, leaves, light and colour.

For now, we mostly have atmospheric sounds (rain, wind, snow, cup filling, etc..), but we think it could be nice to add a very simple melody that appears only at specific moments. We don't want music playing all the time. It should be more like a small emotional touch that comes in sometimes, then disappears again into the ambience.

Maybe the same small melody could come back in slightly different versions depending on the season. For example, spring could feel lighter, summer warmer, autumn a bit more fragile, and winter more distant or empty. The idea is to keep everything soft and not too dramatic.

Overall, we are looking for something minimal, atmospheric and delicate, with a lot of silence and space around it. The sound should support the mood and the narrative, but not take too much attention.

We will put a swisstransfer link in the mail with the sound we use for now for each season as a base. We will put the pdf also, so you can have an idea of the project.

It would be nice if you can try the experience of the game once on the tablet to get a better idea of the game also. (Maybe douglas can arrange that ?)
